Rationale for the Decision

The main rationale for the NWMB's decision to approve the management plan for musk-oxen in the Kivalliq region was based on the following 3 factors:

1. The management plan proposes using the following three levels of management intensity depending on the status and trend of the population:
 - (A) core management for stable or increasing populations;
 - (B) enhanced management for declining population size; and
 - (C) critical threshold management to be implemented when the population size drops below that required to support subsistence harvesting.
2. The management zone boundary changes, removal of seasonal restrictions, and increase in TAH (as previously approved by the Board) are recommended when musk-ox populations are stable or increasing in size.
3. The Board's resolution requires NWMB approval of any changes to non-quota limitations and/or total allowable harvests.

Conclusion

The NWMB hereby forwards you, pursuant to section 5.3.8 of the Nunavut Land Claims Agreement, its decision with respect to the approval of the proposed Kivalliq Musk-ox Management Plan.

Should you have any questions or concerns with respect to this decision or the rationale provided by the NWMB, please do not hesitate to contact the Board.

Yours sincerely,

Willie Nakoolak
A/Chairperson of the Nunavut
Wildlife Management Board
