

Canadian Wildlife Service Species at Risk Program Update To the Nunavut Wildlife Management Board

December 2015

1. Pre-listing Consultations for Red-necked Phalarope (Separate Briefing Note)

In November 2014, COSEWIC (Committee on the Status of Endangered Wildlife in Canada) assessed the Red-necked Phalarope, a shorebird species found throughout Nunavut, as a species of Special Concern.

Environment Canada's Canadian Wildlife Service will begin pre-listing consultations from November 2015 - February 2016 and CWS is requesting NWMB input on the consultation process. A separate briefing note provides information regarding the pre-listing consultations, consultation material and communities to be consulted.

2. Management Plan for Peregrine Falcon in Canada – Final Approval (Separate Briefing Note)

The Peregrine Falcon was listed as Special Concern under the federal *Species at Risk Act* and a proposed management plan was developed and posted on the Species at Risk Registry (www.sararegistry.gc.ca) for the 60-day public comment period. This period ended on July 28, 2015. Environment Canada will have 30-days to consider comments received and finalize the document. The document is being prepared for final posting and CWS is requesting a decision on final approval for the document prior to final posting. Additional information regarding the final approval of Peregrine Falcon by the NWMB is provided in a separate briefing note.

3. A Guide to Species At Risk in Nunavut

CWS is in the initial stage of developing "A Guide to Species at Risk in Nunavut" booklet and is interested in partnering with the NWMB, Government of Nunavut, Department of Fisheries and Oceans and Parks Canada. CWS plans to contract the draft development and is looking to partners to provide reviews and input into the document. The publication will be modelled after a similar NWT document that was done cooperatively with the Government of the NWT (<http://www.nwtspeciesatrisk.ca/news/guide-species-risk-nwt-2014-edition>).

4. Species at Risk Stewardship Funding – Call for Expressions of Interest/Proposals

Environment Canada will be sending out a call for expressions of interest/proposals for the 2016-2017 fiscal year for species and habitat conservation work. These programs are offered jointly by Environment Canada, Fisheries and Oceans Canada, and Parks Canada Agency under the auspices of the *Species at Risk Act* to help engage Canadians in stewardship and recovery actions.

The four funding streams are:

1. Habitat Stewardship Program (HSP) for Species at Risk
2. Habitat Stewardship Program (HSP) for Prevention
3. Aboriginal Fund for Species at Risk (AFSAR)
4. Aboriginal Fund for Species at Risk (AFSAR) for Prevention

The “Prevention” streams of funding are for Canadian species not listed under the Species at Risk Act or assessed by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC).

5. Recovery Strategy and Management Plan for Red Knot in Canada – Development Update

Red Knot is a shorebird which was assessed by COSEWIC in 2007 and listed under the Species at Risk Act in 2012 as Red Knot *rufa* subspecies (Endangered), *roselaari* type (Threatened) and *islandica* subspecies (Special Concern). EC developed a combined draft recovery strategy/management plan for the species. Community consultations were completed in July and August 2015. The second jurisdictional review and support to post request occurred in September 2015, and the proposed recovery strategy will be posted on the Species at Risk Registry for the 60-day public comment period shortly. Following the public comment period, Environment Canada will have 30-days to consider comments received and finalize the document. Once finalized, the NWMB will be asked to consider support for the document prior to final posting.

6. Management Plan for Barren-ground Caribou (Dolphin and Union population) in Canada – Development Update

Barren-ground caribou (Dolphin and Union population) was listed as Special Concern under the federal *Species at Risk Act* in 2011 and CWS is working cooperatively with all co-management partners in Nunavut and the NWT to develop the management plan. A draft framework and a draft management plans were developed following a meeting in March 2015. A second co-management partner meeting is scheduled for Cambridge Bay from December 1-3, 2015, to review the document.

Once completed, the collaboratively developed management plan will be adopted by Environment Canada with any additional components added or exemptions in order to make it “SARA-compliant”.

7. Recovery Strategy for Peary Caribou in Canada – Development Update

Work is continuing on the collaborative development of the Peary caribou recovery strategy and the knowledge assessment to help inform critical habitat identification. The recovery strategy is due to be posted as proposed on the federal Species at Risk Registry by March 2017. Upcoming activities include:

- Recovery Strategy for Peary Caribou in Canada draft complete and being sent for review to technical committee and co-management communities – Fall 2015
- First Jurisdictional Technical Review (WMAC, NWMB, GNWT, GN) – Fall 2015
- Community consultation on the draft recovery document – Winter 2016

Appendix 1: COSEWIC assessment schedule for species found in Nunavut.

Submission to the Nunavut Wildlife Management Board

For

Information: X

Decision:

Issue: Pre-listing consultations for the Red-necked Phalarope as a species of Special Concern under the federal *Species at Risk Act* (SARA)

Background:

- Red-necked Phalarope was assessed by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) in November 2014 and designated as a species of Special Concern.
- COSEWIC's reason for designation: This bird has declined over the last 40 years in an important staging area; however, overall population trends during the last three generations are unknown. The species faces potential threats on its breeding grounds including habitat degradation associated with climate change. It is also susceptible to pollutants and oil exposure on migration and during the winter. This is because birds gather in large numbers on the ocean, especially where currents concentrate pollutants.
- In Nunavut, Red-necked Phalarope is found in each region except the high arctic islands (Range map above).
- On October 6th, 2015, COSEWIC submitted its assessment of the Red-necked Phalarope to the Minister of the Environment. The Minister of the Environment will respond within 90 days, by posting a response on the SARA Public Registry. The response statement will indicate the scope of the consultation and timelines.
- Environment Canada's Canadian Wildlife Service (CWS) will consult with the appropriate Minister(s), wildlife management boards and Aboriginal organizations on changes to the List of Wildlife Species at Risk (Schedule 1) of the *Species at Risk Act* for terrestrial species.

- For species that are listed as Special Concern, a management plan is to be prepared within three years of the species' addition to Schedule 1 and added to the Species at Risk Registry. Management plans are prepared in cooperation with the jurisdictions, wildlife management boards, and Aboriginal organizations.
- While immediate protection under SARA for species listed as Extirpated, Endangered and Threatened do not apply to species listed as Special Concern, any existing protections and prohibitions continue to be in force.

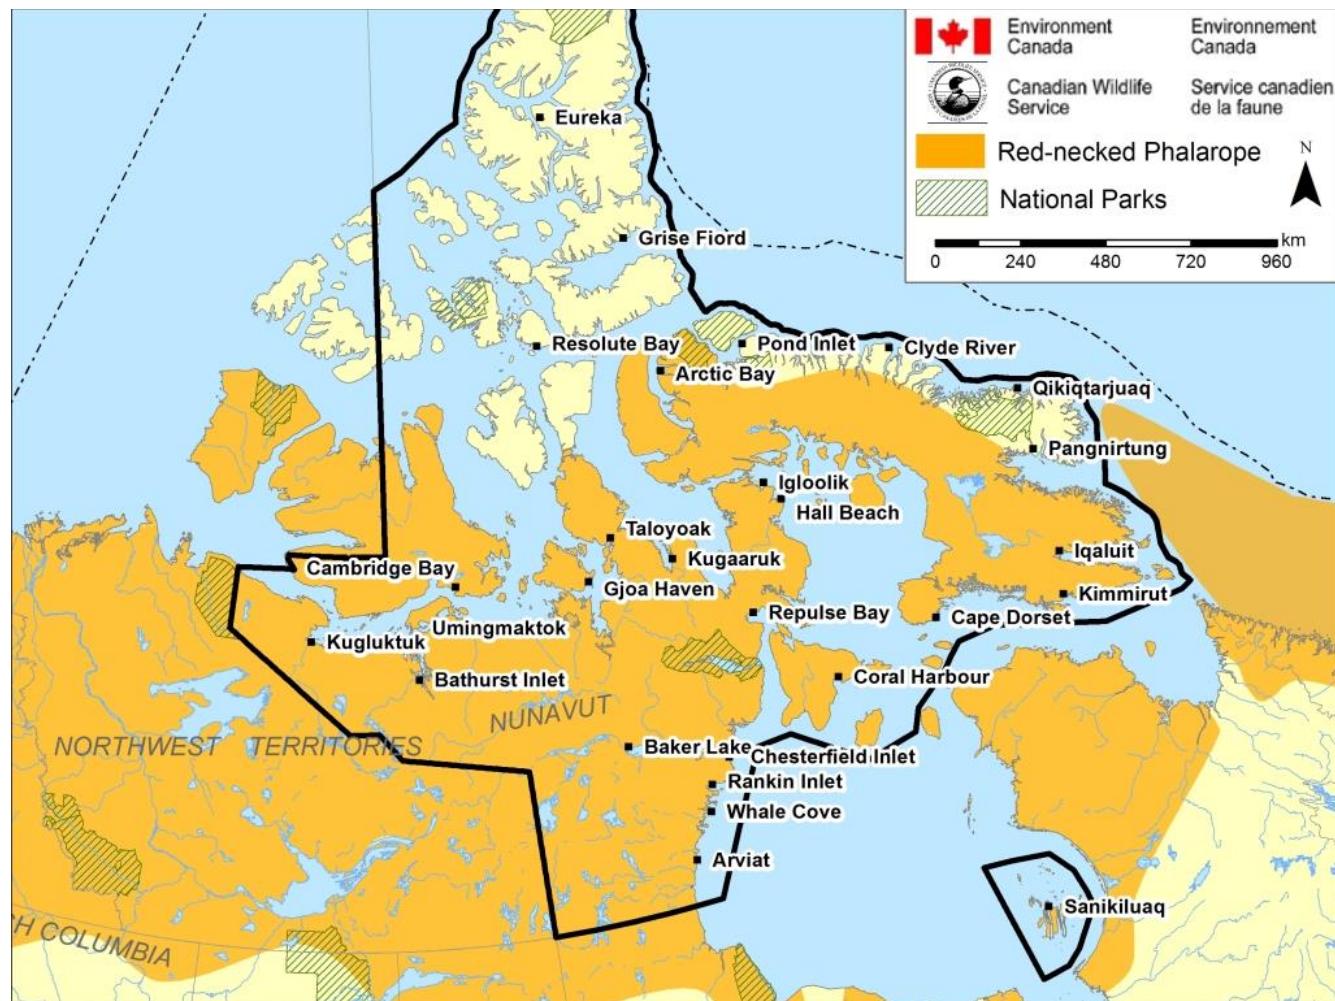

Next Steps - Consultation Process:

- Jurisdictions and wildlife management boards, including the NWMB and the Government of Nunavut, will be asked to review and provide input into the draft Terrestrial Issues Flagging (TIF) document, which outlines the species' current status, presence on the landscape, projected impact of listing, and issues flagged. This process helps inform the decision on the consultation timeline – normal or extended.
- Consultations on the proposed listing will be held between November 2015 and February 2016 with hunters and trappers organizations (HTOs) and regional wildlife boards. Organizations are asked to provide their formal position on the proposed listing (i.e. oppose, support or are indifferent) and with any other comments, concerns or information that they feel should be considered.
- Consultation packages, in Inuktitut and English, will be sent by mail and email, include: a letter, a narrated PowerPoint, and a questionnaire/response form. The full COSEWIC Assessment and Status Report will be provided in digital format in English only.
- Given the range of the species, CWS plans to consult all Nunavut communities with the exception of Grise Fiord and Resolute Bay.
- To support consultations, CWS will extend an offer to provide more information, if requested, in the best means possible, including attending a board meeting by teleconference. A reminder email and follow-up phone calls, to the extent possible, will be done to seek input from as many organizations as possible.
- Following consultations, CWS will summarize the consultation results and present them to the Board at the next quarterly meeting following the consultation period and seek NWMB's decision on the proposed listing of the species.

Request of the NWMB

- That the NWMB provide Environment Canada with any feedback on the consultation process (material and communities to be consulted) to obtain Hunters and Trappers Organizations/Associations' input and support for the proposed listing of Red-necked Phalarope as a species of Special Concern under the federal *Species at Risk Act*.

RE: Proposed Listing of Red-necked Phalarope as Special Concern under the federal Species at Risk Act

The purpose of this package is to share information and get your feedback on the proposed listing of **Red-necked Phalarope** as a species of Special Concern under the federal *Species at Risk Act* (SARA).

You are invited to submit comments on the potential impacts of amending the List of Wildlife Species at Risk according to this Committee on the Status of Endangered Wildlife in Canada (COSEWIC) status assessment. Your comments will be considered and will inform the federal Minister's recommendation.

By email and mail, we are sending you a package including the following materials:

- A narrated powerpoint presentation providing you with detailed information about **Red-necked Phalarope**, the COSEWIC assessment and details on what the proposed listing means to you (in English and Inuktitut).
- COSEWIC Assessment and Status Report (full document) for **Red-necked Phalarope** (digital copy only and English only).
- A questionnaire/response form for you to provide comments and indicate whether you support/do not support/ are indifferent to the proposed listing (in English and Inuktitut).

We hope your organization will review the information in this package. If you have any additional questions, concerns or information that you feel should be considered in the listing decision by the Nunavut Wildlife Management Board (NWMB) and the federal Minister of the Environment, please let us know and we will follow up with you as needed. If you feel this package provides enough information for you to make a decision, please respond in writing to the Canadian Wildlife Service telling us your formal position on the proposed listing of **Red-necked Phalarope** as a species of Special Concern. You can either send us a letter and/or you can fill in the attached questionnaire/response form and email or fax it to us.

There will also be an opportunity to provide comments during the 30-day public consultation period associated with pre-publication in Canada Gazette Part I.

Environment
Canada Environnement
Canada

We request your response by **Date** so that we can report your feedback to the NWMB at their quarterly meeting in March 2016.

Please send your comments or questions to:

Red-necked Phalarope Proposed Listing as Special Concern

The following questions are intended to assist you in providing comments. They are not limiting and any other comments you may have are welcome. We also encourage you to share descriptions and estimates of costs and benefits where possible.

Questionnaire filled out by:

(Print name / title)

Organization:

Date questionnaire completed

Have you heard of Red-necked Phalarope before? Yes No

Have you seen Red-necked Phalarope in your area? Yes No

Do you have enough information to make a decision on your position/opinion on the proposed listing of Red-necked Phalarope as species of Special Concern under the federal *Species at Risk Act*?

Yes No *If you need more information, someone will contact you to see how best to provide this information*

What is your organization's position/opinion on the proposed listing of Red-necked Phalarope as a species of Special Concern?

- Support the proposed listing of Red-necked Phalarope as Special Concern
- Do not support the proposed listing of Red-necked Phalarope as Special Concern
- Indifferent to the proposed listing of Red-necked Phalarope as Special Concern

What are your reasons for this position?

About the Red-necked Phalarope

- ደንብ ደንብ የሚፈጸማል ስምምነት የሚፈጸማል
Female selects nesting sites and may mate with multiple males
- የሚፈጸማል ስምምነት የሚፈጸማል
Nests may contain 4 eggs, but parents do not defend their territory
- ደንብ ደንብ የሚፈጸማል
Males undertake the majority of parental care, incubating the eggs after the female leaves in search of other mates
- ደንብ ደንብ የሚፈጸማል
Females then group near the coast or leave the breeding grounds entirely
- ደንብ ደንብ የሚፈጸማል
Males remain to tend to young

Submission to the Nunavut Wildlife Management Board

FOR DECISION

Issue: Request for approval of the final *Management Plan for Peregrine Falcon in Canada* under the federal *Species at Risk Act*

Background:

- The draft recovery document was sent to the NWMB in August 2014 for the first jurisdictional review.
- Environment Canada presented to the NWMB at their September 2014 meeting to share the proposed path for consultations on the recovery document and requested feedback from the NWMB.
- Community consultations on the recovery document were conducted from September to October 2014. Environment Canada received the following:
 - Support / No concerns: Arviat HTO, Omingmaktoq HTA, Aivilik HTO, Amaruq HTO
 - Indifferent / Need more information: Aqiq HTO, Arviq HTO
- Environment Canada posted a proposed management plan on the Species at Risk Registry in May 2015 for the 60-day public comment period, which ended on July 28, 2015.
- Environment Canada considered the comments received during the 60-day public comment period and revised the document.

Next Steps:

- This briefing is the notification of the results of the consultations on the recovery document in Nunavut.

- Environment Canada is now prepared to post the recovery document on the Species at Risk Registry as final.
- Environment Canada is providing the recovery document to the NWMB for final approval decision as per the NLCA s. 5.2.34

Recommendation:

- That the NWMB considers whether or not they approve the final Management Plan for the Peregrine Falcon in Canada under the federal Species at Risk Act as per the NLCA s. 5.2.34.

Broad Strategies and Conservation Measures

በኢትዮጵያውያንድ ፈርማዎችና የስራውያንድ በግብር አገልግሎት የሚሸጠል፡፡

There are five general strategies identified to achieve the management objective:

የኢትዮጵያውያንድ ቤት አዲስ አበባ

Conservation Measures

There are 16 specific conservation measures proposed under the four general strategies. Some of the high priority conservation measures are:

“Եթե այդքան պահանջվում է մասնակիությունը՝ ի՞նչ է առաջարկությունը? ”

How will success be measured?

ԱՐԴՐՈՒԹՅԱՆ ՀՐԱՄԱՆԸ ՀԱՅԱՍՏԱՆԻ ՀԱՆՐԱՊԵՏՈՒԹՅՈՒՆ
Success of the management objective will be evaluated every five years to determine if:

- 2025-**፳፻፲፭** የፌዴራል ስራውን በፌዴራል እና ማስቀመጥ ይችላል፡፡ ይህንን የፌዴራል ስራውን በፌዴራል እና ማስቀመጥ ይችላል፡፡
 - By 2025, the entire Peregrine Falcon *anatum/tundrius* will continue to grow and its range will be maintained.
 - 2025-**፳፻፲፭** የፌዴራል ስራውን የፌዴራል እና ማስቀመጥ ይችላል፡፡ ይህንን የፌዴራል ስራውን በፌዴራል እና ማስቀመጥ ይችላል፡፡
 - By 2025, known Peregrine Falcon *anatum/tundrius* nesting sites will continue to be occupied on a regular basis and the number of fledglings will be sufficient to ensure a self-sustaining population.
 - የፌዴራል ስራውን የፌዴራል እና ማስቀመጥ ይችላል፡፡ የፌዴራል ስራውን የፌዴራል እና ማስቀመጥ ይችላል፡፡
 - The increase in the population will be measured using the results of national surveys carried out every five years as well as the result of bird counts performed by raptor observatory networks in Canada and the United States.

Decision: X

Issue: Little Brown Myotis (*Myotis lucifugus*) - Nunavut Wildlife Management Board engagement for species with unknown or extralimital ranges in Nunavut

© GNWT / A. Kelly, ENR

Little Brown Myotis – an Endangered bat species

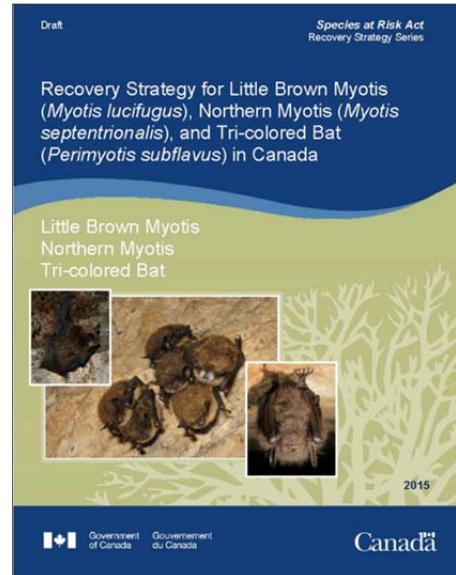

Range of Little Brown Myotis in Canada

Background:

- The Committee on the Status of Endangered Wildlife in Canada (COSEWIC) emergency assessed the Little Brown Myotis, Northern Myotis and Tri-coloured Bat as Endangered in February 2012, and confirmed their assessment in November 2013.
- The COSEWIC Assessment and Status Report does not include Nunavut in the occurrence/range for Little Brown Myotis but states that it "occurs in every province and territory, with occasional records in southwestern Nunavut". The range map above uses '?' to indicate Nunavut records that are probable but unconfirmed, or may be extralimital.
- In 2014, all three bats were emergency listed under the federal *Species at Risk Act* (SARA).

- As required under the federal *Species at Risk Act* (SARA), a recovery strategy must be developed for species listed as Endangered and Threatened. Environment Canada's Canadian Wildlife Service (CWS) developed a combined recovery strategy for all three species.
- CWS conducted the first jurisdictional review on the draft recovery document in May 2015. Community consultations were conducted in June-July 2015. The second jurisdictional review and support to post on the Species at Risk Public Registry was done between September – October 2015. The proposed recovery document will be posted on the Species at Risk Registry (www.sararegistry.gc.ca) for a 60-day public comment period in the coming months. Environment Canada will then have 30 days to consider the comments and post the final recovery document on the Species at Risk Registry.
- Given the best available information on the species in the COSEWIC Assessment and Status Report, CWS did not conduct consultations in Nunavut.

Request to the Board:

That the NWMB consider if there are concerns with the approach taken for Little Brown Myotis and if so, provide direction.

That the NWMB consider the Little Brown Myotis case and provide advice to CWS on how it would like to be engaged for future species that may have limited or unknown ranges in Nunavut.
