Hi Richard,

Thanks for doing this talk for me Richard. Please find attached some figures/pictures you can display for the board. Our recommendation will be to increase the MX/18 Muskox Population Quota (also called the central Kivalliq population) from its current level (93) to one hundred eighty two (182) (which is 5% of the lower confidence limit of 3,637 adults estimated in July 2010). We are recommending all other components of the most current regime (i.e. no seasons, the new MX/18 zone) remain the same. We are also recommending that the KWB request a Northern Kivalliq muskox survey (the new MX/17), next summer and a followup survey of the central kivalliq muskox (MX/18) population by 2016. I'll have more for you on Monday. Please let me know that you received this.

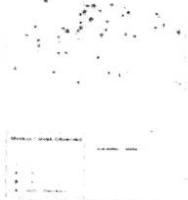

Cheers,

Mitch
