RE: Field Work at Nasaruvaalik Island and Prince Leopold Island

On 21 March 2011, Mark Mallory presented information on the bird work conducted by the Canadian Wildlife Service at Nasaruvaalik Island and Prince Leopold Island.

The Resolute Bay HTA supports the continued work at these sites.

Le 21, 2011, le Loup Céleste a été déclaré à la CCRD
par le Dr Mark Mallory de la SPC.

La RDA a été invitée à assister à la présentation de M. Mallory.
C'est avec plaisir que nous soutenons les efforts de la SPC.

Sincerely,

**Philip Manik Jr
Chair, Resolute Bay HTA**

RE: Ivory Gull Recovery Strategy

Mark Mallory presented information on the Ivory Gull Recovery Strategy on 21 March 2011, which followed updates on this species from the Canadian Wildlife Service since 2002.

Людмила Соловьева 21, 2011.
Канадский Управление по охране природы
2002 г.

The potential threats to Ivory Gulls in Canada are:
• Ильское охота
• Пищевая промышленность
• Промышленные производство
• Исследование и мониторинг
• Изменение климата
• Осквернение
• Пестициды
• Нефтепродукты

- Illegal shooting
- Predation
- Industrial activities
- Research and monitoring
- Climate change
- Contaminants
- Pesticides
- Oil pollution
- Hunting

The planned actions under the recovery strategy were identified as "what do we think needs to be done", as follows:
• Ильское охота

Illegal shooting

- Continue to work with Greenland to ensure communities do not shoot Ivory Gulls
 - they are protected there but the laws may be ignored

Prevention

- Investigate feasibility of protecting certain colonies during breeding season to keep predators (bears, foxes) away until chicks leave

Industrial activities

- Continue to work with mining companies to keep 2 km away from colonies
- Critical habitat will be 2 km buffer around known colonies

Research and Monitoring

- Conduct LEK study in Grise Fiord
- Use satellite transmitters at Seymour Island to determine key migration and winter areas
- Reduce surveys to 1 every 3 years
- Survey Princess Marie Bay and Alexandra Fiord for unknown colonies
- Continue international cooperation

Climate change

- Little we can do directly on this
- Continue to encourage activities that reduce greenhouse gas emissions

Contaminants

- Continue to sample eggs or feathers to determine if contaminants in Ivory Gulls are changing and if they threaten health
